

FILTERMAX FILTRATION SERVICES LTD

MANUFACTURERS AND SUPPLIERS TO THE HVAC INDUSTRY

SYNTHETIC FILTER MEDIA

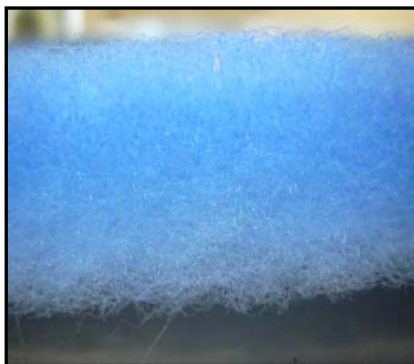

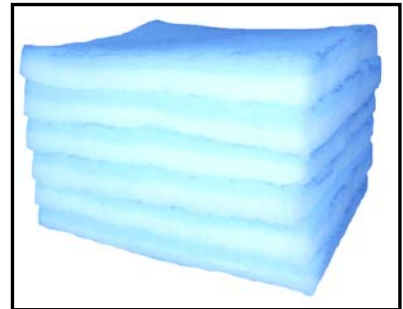

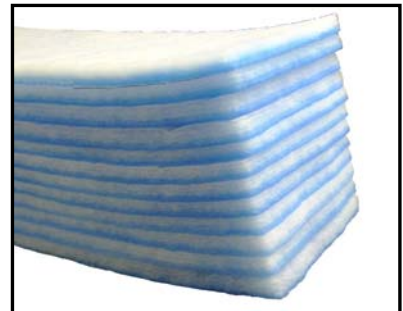

Synthetic filtration media comes in a varying range of depths and densities. Thermally bonded polyester fibres give high dust holding capacity in efficiencies ranging from EU2 to EU5. These materials are suitable for a wide range of applications including general HVAC, paint booths and countless industrial applications.

Significant savings can be made where used in place of card framed panel filters. With an initial purchase of a steel holding frame, replacement pads are economical and convenient. Galvanized steel holding frames and replacement pads also provide a cost-effective solution where moisture prevents the use of card framed panel filters.

Our extensive range is available in roll or pre-cut pad form including -

6mm	120g	EU2	General Use
12mm	150g	EU2/3	General Use
20 – 25mm	250g	EU3	General Use
20mm	290g	EU4	General Use
50mm	400g	EU4	General Use
15mm	300g	EU5	General Use
25mm	560g	EU5	Paint Booth Intake Premium

This is only a small selection of our complete range which covers not only the most common types but also many speciality medias. Please enquire for your specific requirements. Full stock list and technical data available.
