**MULTI-CELL HIGH-LOFT BAG FILTER**

The LMG bag filter range is a medium grade air filter in efficiencies from G3 to G5. Manufactured from synthetic lofted media, key benefits are excellent dust holding properties and naturally low resistance. The extended surface area of the filter and the self-supporting nature of the pockets give optimum performance throughout the whole filter. Typical applications are for general HVAC, particularly suitable where there are long intervals between changes to reduce maintenance costs. This range is suitable for use as a main filter or for use as a pre-filter to finer filtration. Also available in carbon-impregnated polyester for the removal of odours.

G4/EU4

**Media**

Self-supporting pockets manufactured from lofted, non-toxic thermally bonded polyester

**Frame Construction**

Galvanised steel header frame  
Mild Steel wire pocket separators  
Optional sponge rubber gasket

G5/EU5

**Standard Sizes**

Header Sizes - 24 x 24 (592 x 592)  
- 24 x 20 (592 x 492)  
- 24 x 12 (592 x 287)

in 20, 22 or 25mm depths

**Pocket Lengths**

From 150mm to 600mm

**Pocket Numbers**

From 2 pockets to 12 pockets  
(subject to size)

Carbon

Custom sizes to order
